

Hydraulic Forging

" Advanced Efficiency "

We produce rear axle shaft of commercial vehicles like MAN,ISUZU,MERCEDES,VOLVO etc. ERAXLE is HAK-ER's trade mark.

In response to customer request, we can forge min.Q30 - max.Q200 to upset Q400 with our hydraulic press.

We normalized all parts after the forging. The parts are one-piece parts with this process and they do not need welding. In a changing competitive world market, we are at the forefront on customer request.
